## Merchandising Tips

**A) Panel set-up** – When working within a 4' section, you can fit four backer panels from left to right. The panels will fit perfectly within the 36" of pegboard space.

**B) Hook placement** – Once the panels are secured, you should start inserting hooks into the pre-punched holes on each panel.

**Note:** If you are using scanner type hooks supplied by your customer, each piece of product will hang higher than the pre-printed graphics on each panel. Please keep in mind that the panel system was designed using non-scanner hooks only. The extra wire used on the non-scanner portion of the hook causes the product to hang lower than if a single non-scan type hook were used.

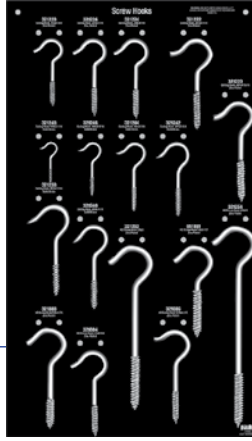

**C) Product placement** – Match each item with the correct panel location. Do this by locating the correct panel, graphic, and item number.

**IMPORTANT:** When planogramming displays using the backer panel system, keep in mind the height of the gondola you are working with. The height dimensions of our panels are 12" and 21".
